

## ENVIRONMENTAL POLICY

Institute of Isotopes Co. Ltd. is committed towards environmental awareness since our activities are based on working with radioactive and other dangerous materials as most of our products are radioactive with different levels of activity. Our activities are organised and executed so that pollution of environment is prevented whenever it is possible. If it is impossible, having to cause the least environmental impact. Our company is aware that such behaviour is of crucial importance. In addition to customer expectations it is important to take into consideration environmental aspects in production and related services. It covers our work activities either on our own premises or at any site defined by our customers.

Important part of our commitment is offering safe storage services and radioactive waste conditioning.

We continuously improve environmental performance through environmental objectives, targets and programmes.

In terms of organisational operation our management is committed to fulfilling requirements of relevant laws and regulations that are applicable to environmental aspects of our activities.

Our employees are aware of environmental consequences of their work; they are personally responsible for achieving principles laid down in environmental policy and continual improvement of environmental awareness.

We established and apply tools of internal and external environmental communication. Beyond obligatory reports we inform our customers and other interested parties in a planned manner or on request.

According to our obligation we regularly report to the authorities.

In choosing and evaluating suppliers we take into account environmental and health protection aspects.

Budapest, 01.07.2012.

Mihály Lakatos  
Managing Director
